

Disasters

What is a disaster?

A disaster is often sudden. It causes great damage, destruction and human suffering.

For example?

- earthquakes
- hurricanes
- cyclones
- droughts
- volcanoes
- floods

Deadly disasters 1990-2000

Year	Location	Death toll	Disaster
1990	Iran	36,000	Earthquake
1991	Bangladesh	140,000	Cyclone
1995	Japan	6,300	Earthquake
1996	China	531	Landslide
1997	Montserrat	32	Volcano
1998	Central America	10,000	Hurricane
1999	Turkey	16,000	Earthquake
2000	Mozambique	650	Floods

TRY THIS:

- Click on to the disasterrelief.org website and find out what disasters occurred where last year.
- Find out what causes earthquakes and droughts.

It's not fair

In emergencies it is people who already live in poverty who suffer most because:

- They are very vulnerable to start with. For example, their houses are not built of the best quality materials. They may live on steep hillsides prone to landslides or riverbanks prone to flooding because they cannot afford good land.
- They have nothing to fall back on. For example, if they lose their crops because of drought they can't afford to buy food.

TRY THIS:

- Hold a class debate on: "It is more important to reduce poverty around the world than to raise money for disaster relief."
- List at least three ways you could help bring about a more just and equal world.

- fact file*
- About 95 per cent of deaths caused by disasters occur in poor countries. A disaster of a similar nature and size causes more deaths in poor countries than in rich ones.
 - In richer countries the costs of rebuilding after a disaster are high, but there is always money and enough technology for reconstruction.
 - In poor countries the costs may be lower but finding the money is much more difficult. Therefore disaster has a far greater impact on poor countries.

Disaster Relief

- fact file*
- "While earthquakes and floods capture headlines, the uncontrolled spread of infectious disease takes most lives. The death toll for infectious diseases (such as AIDS, malaria, respiratory diseases and diarrhoea) is 160 times greater than the number killed in last year's disasters."
- World Disaster Report 2000

CAFOD is there in a crisis... and beyond

In 1999 CAFOD responded to more emergencies than ever before (40 countries).

CAFOD is concerned about the effect of disasters, especially on people living in poverty. In its *vision, mission and values* statement CAFOD says that everyone should "have access to food, shelter and clean water; to a livelihood, health and education".

What does CAFOD do?

1. Immediately

When there is a disaster CAFOD works with other major British charities in the Disasters Emergency Committee (DEC) to raise money from the public.

This money helps CAFOD provide food, clothing, medicines, shelter and clean water. At this early stage the priority is saving people's lives.

After Hurricane Mitch in Central America people in the area needed food packages, cooking stoves, clean water, medicines, sanitation (toilets) and hygiene supplies (eg soap).

In August 1999 one of the worst earthquakes ever recorded hit north-east Turkey. Here people needed strong tents and wooden houses as well as food, clean water and medicine.

Danger!

After a disaster disease spreads quickly if there is no clean water and no toilets.

TRY THIS:

- Find out what sort of diseases can spread when there is no clean water.

2. Long-term response

CAFOD works in partnership with local people and organisations, helping communities to rebuild and start again.

- In Bangladesh CAFOD has supported the building of cyclone shelters. These are buildings where people can stay in safety whilst a cyclone rages.
- In Mozambique, after the massive floods, CAFOD provided grants to buy building materials for new houses to be built on higher ground.
- Mozambique is one of the poorest countries in the world with more than 90 per cent of its people living on less than US\$1 (about 60p) a day. Mozambique would be more able to cope if it wasn't paying US\$1.4 million a week in debt repayments. CAFOD campaigns to have poor countries' debts reduced or cancelled.

TRY THIS:

- Work out how much money a family of four needs each day to live on in Britain.
- Make a week's "money" diary showing how much you spend every day for a week.

TRY THIS:

- Can you think of at least one disaster/emergency that happened in the UK in the last year? What was it? Who was involved in the rescue operation and how?
- What would you need if a natural disaster like a flood or an earthquake hit your town or village? What would you need most the first day, after one week, one year later?
